Low voltage products spare parts
for circuit-breakers, switches, contactors and arc guards

You will find ABB products supporting all applications you can imagine. Approved by local and international standards, the strength of ABB's solutions is supported by our global service network to provide peace of mind.

The focus for ABB is to think of the customer’s application first. ABB engineers continuously evaluate ways to simplify the installation. Use of an ABB product can improve productivity and machine quality.

Introduction
ABB Service

ABB Service is more than a simple Service!

ABB is a pioneering technology leader for utilities, industries, transportations and infrastructures. The company was found in 1988 by the merger between ASEA and Brown Bover & Cie (BBC), two of the most important electrical companies of the last century.
ABB has extensively invested in Service developing advanced solutions aim to guarantee the continuous revamping of products and systems according to the technology progress.

Spare parts
Spare parts availability is the key of a successful Service!

A spare part is a replaceable product's component fundamental to ensure the functioning of the system to which it belongs.
Having original spare parts always at your disposal means guarantee the highest level of performance to your plant reducing significantly the risk of failure as well as the down-time due to the maintenance.
ABB guarantees a 100 % of compatibility of all Spare parts that are going to replace the defective components of your equipment.
All Spare parts are equipped with instruction sheets to enable a correct and safety assembly and are delivered in short times in order to fulfill customer's needs.

Introduction
Service for low voltage products

ABB provides a full range of low voltage solutions to connect, protect, control and measure electrical installations, enclosures, switchboards, electronics and electromechanical devices.

Low voltage service portfolio includes a wide range of solutions resulting from the research and realized in order to keep your plant operating reliably and efficiently.

Retrofitting kits
When repairing an asset is no longer possible or convenient, ABB offers standard and advanced Retrofitting solutions consisting in the addition of new technologies or features to the existing systems in order to upgrade and to enhance your devices.

Maintenance
ABB Service presents different maintenance solutions with the aim to ensure the continuous operation of your plant.
ABB offers corrective and preventive maintenance programs as well as predictive maintenance tolls developed to guarantee a relevant reduction of the total cost due maintenance and repairs.

Training
ABB Service performs accurate training sessions intended to supervisors, technicians, engineers, users and maintenance workers aim to teach how to respond rapidly and efficiently in different critical situations.
ABB's training courses are opened to customers, partners and own personnel.

Spare parts
Spare parts for our products are available in every moment and, in accordance to the difficult of the replacement process, can be applied by customers or by ABB's technical experts. In the first case, ABB Service provides specific mounting instructions.

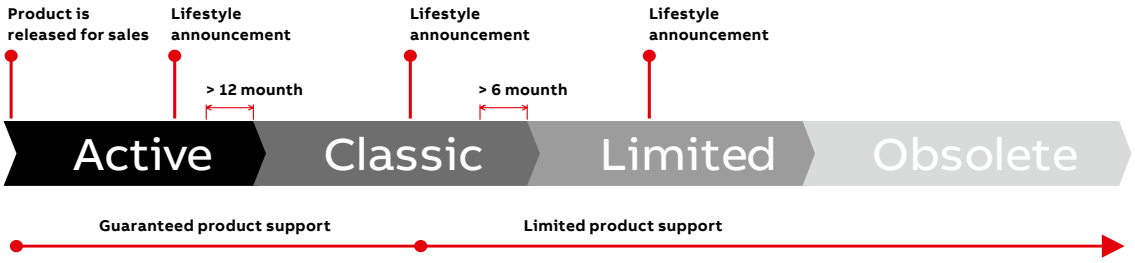

Replacement
ABB offers the possibility to replace own products with completely new ones.
ABB Service guarantees a total availability of a product as long as it is in the Classic phase of the Life Cycle Management and a partial availability during the Limited phase.
More details of the Life Cycle Management of ABB products are explained in the next paragraph.

Our competent network of service units is spread around the world and is always ready to ensure the satisfaction of your demands with the utmost care.

Introduction
LCM

LCM
Every year, ABB SACE reviews the Life Cycle Management policy (LCM) for every product and publishes information on the exact product's phase. There are 4 phases: Active, Classic, Limited and Obsolete.
(For more details visit our website: http://new.abb.com/service/lifecyclemanagement)

Active = standard development, production and sale.
Classic = maintenance phase of the product: spare parts availability is guaranteed for replacing in existing plants.
Limited = spare parts are available. The production of the CB's whole range is not guaranteed and the technical support is limited.
Obsolete = technical support is no more guaranteed. The production of the CB's whole range has ended but spare parts might be available. Retrofit solutions are available.

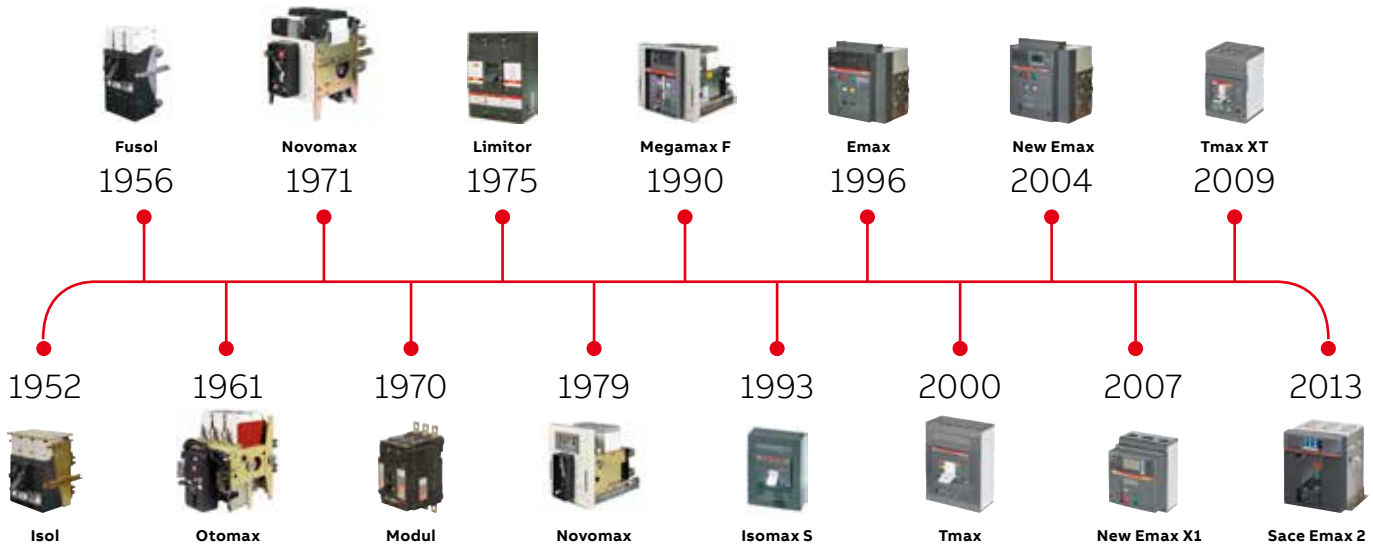

Circuit-breakers

ABB SACE means quality and innovation inside the low voltage world. ABB has celebrate success with various range of air (ACB) and moulded case (MCCB) circuit-breakers by the acquisition of SACE (Società Anonima Soluzioni Elettromeccaniche), a market leader in low voltage circuit-breakers that was found in 1918 in Bergamo – Italy.
ABB circuit-breakers have be designed to be adapted in different utilizations, such as industrial and naval applications, power generation installations, buildings, data center and shopping centers.

These devices ensure high performances, safety and guarantee an easy replacement of components. The continuous functioning of every single circuit-breaker is essential for all its applications and ABB Service is constantly looking to efficient solutions in order to maintain customer's devices.
The table below shows all the service solutions for circuit-breakers that are currently available.

Circuit-breakers

With the integration with General Electric at the end of 2018, new devices are now part of ABB portfolio and, consequently are supported by ABB in terms of maintenance and spare parts.
ABB announced the finalization of the acquisition of GE Industrial Solutions (GEIS), GE's global electrification solutions business, on June 30, 2018.
In this regard, in this document there is also the spare parts list of the last GE air circuit brakers: Mpact, EntelliGuard G, EntelliGuard L.

Circuit-breakers
Retrofitting kits

Retrofitting kits
ABB offers three different solutions to retrofit your circuit-breakers: Hard Bus Retrofill, Cradle in Cradle, Direct Replacement.

Hard Bus Retrofill: This solution is a complete substitution of the old circuit-breaker.
The kit consists of:
- special adapter copper bars to connect the terminals of the new circuit-breaker to the busbars designed for the old breaker;
- where the dimension of the new circuit-breaker is more compact, an insulating layer is added, as part of the solution, to create shield for the live electrcal parts;
- Adhesive template and metal adapters to facilitate panel door cutout.

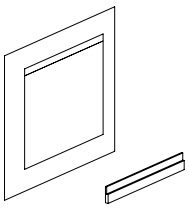

ABB SACE offers even more advanced retrofitting solutions for withdrawable version circuit-breakers. The fixed part of the old circuit-breaker is not removed*:

For more details, visit our website http://new.abb.com/low-voltage/service/service-breakers-switches/extensionupgrades-and-retrofits) and it is necessary to check panel dimensions expecially if there are external devices like heating elements, wiring accessories, fuseholders, CAM switches, etc.

Standard fixed part

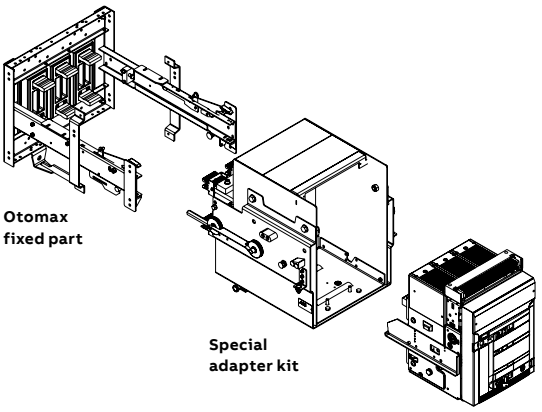

Special adapting kits

Adhesive template to follow for the pannel door cutout

—
* Before ordering, it is necessary to check panel dimensions especially if there are external devices like heating elements, wiring accessories, fuseholders, CAM switches, etc...

Cradle in Cradle: modifications are made to the fixed part of the old circuit-breaker that usually has bigger dimensions. A special fixed part for the new circuit-breaker is mounted into the old fixed part, so that the standard moving part of the new circuit-breaker can be easily racked in and out.

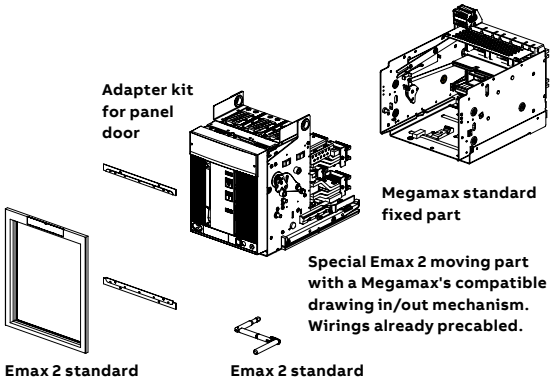

Otomax fixed part

Special adapter kit

New Emax standard Fixed part and moving part

Before choosing any of the advanced solutions, it is necessary to verify that the fixed part is in good conditions: if it is irrevocably broken, it must be substituted. See our Fixed part checklist document (1SDH001279R0002).

Direct Replacement (DR): This is the most advanced solution for the end user which requires the shortest downtime for replacement: the moving part of the old circuitbreaker is removed and a special moving part of the new circuit-breaker is suitably modified and tested to fit into the existing fixed part. This implies very short plant shutdown of the single user. The kit, pre-mounted by ABB SACE, changes the fixed circuit-breaker into a proper moving part to be fitted into the existing fixed part. The only other work that needs to be completed is the cutting of the switchboard panel to suit the size of the new breaker. All standard accessories are already precabled.

Adapter kit for panel door

Megamax standard fixed part

Special Emax 2 moving part with a Megamax's compatible drawing in/out mechanism. Wirings already precabled.

Emax 2 standard gasket for panel's door

Emax 2 standard racking in/out lever

Circuit-breakers
Spare parts

ABB Service continuosly ensures that Spare parts are available to support customer during maintenance activity.

Management: Every time that a new circuit-breaker family is launched ABB defines the list of spare parts to facilitate the customers during maintenance activity. During the product life new spare parts can be defined to upgrade the components of the circuit-breakers.

Product Quality: ABB provides guaranteed and genuine spare parts with all the components tested and equipped with instruction sheets to enable a correct and safety assembly.
The spare parts are classified in "Type A" and not "Type A".
A lot of ABB original spare parts can be easily replaced by the equipment owners. However there are some parts which require more complex, and/or potentially dangerous installation procedures. There last are categorized "Type A" and can only be replaced by qualified ABB technicians who possess the correct tools and competences.
The technicians take part of the Service Network which is accessible to you.

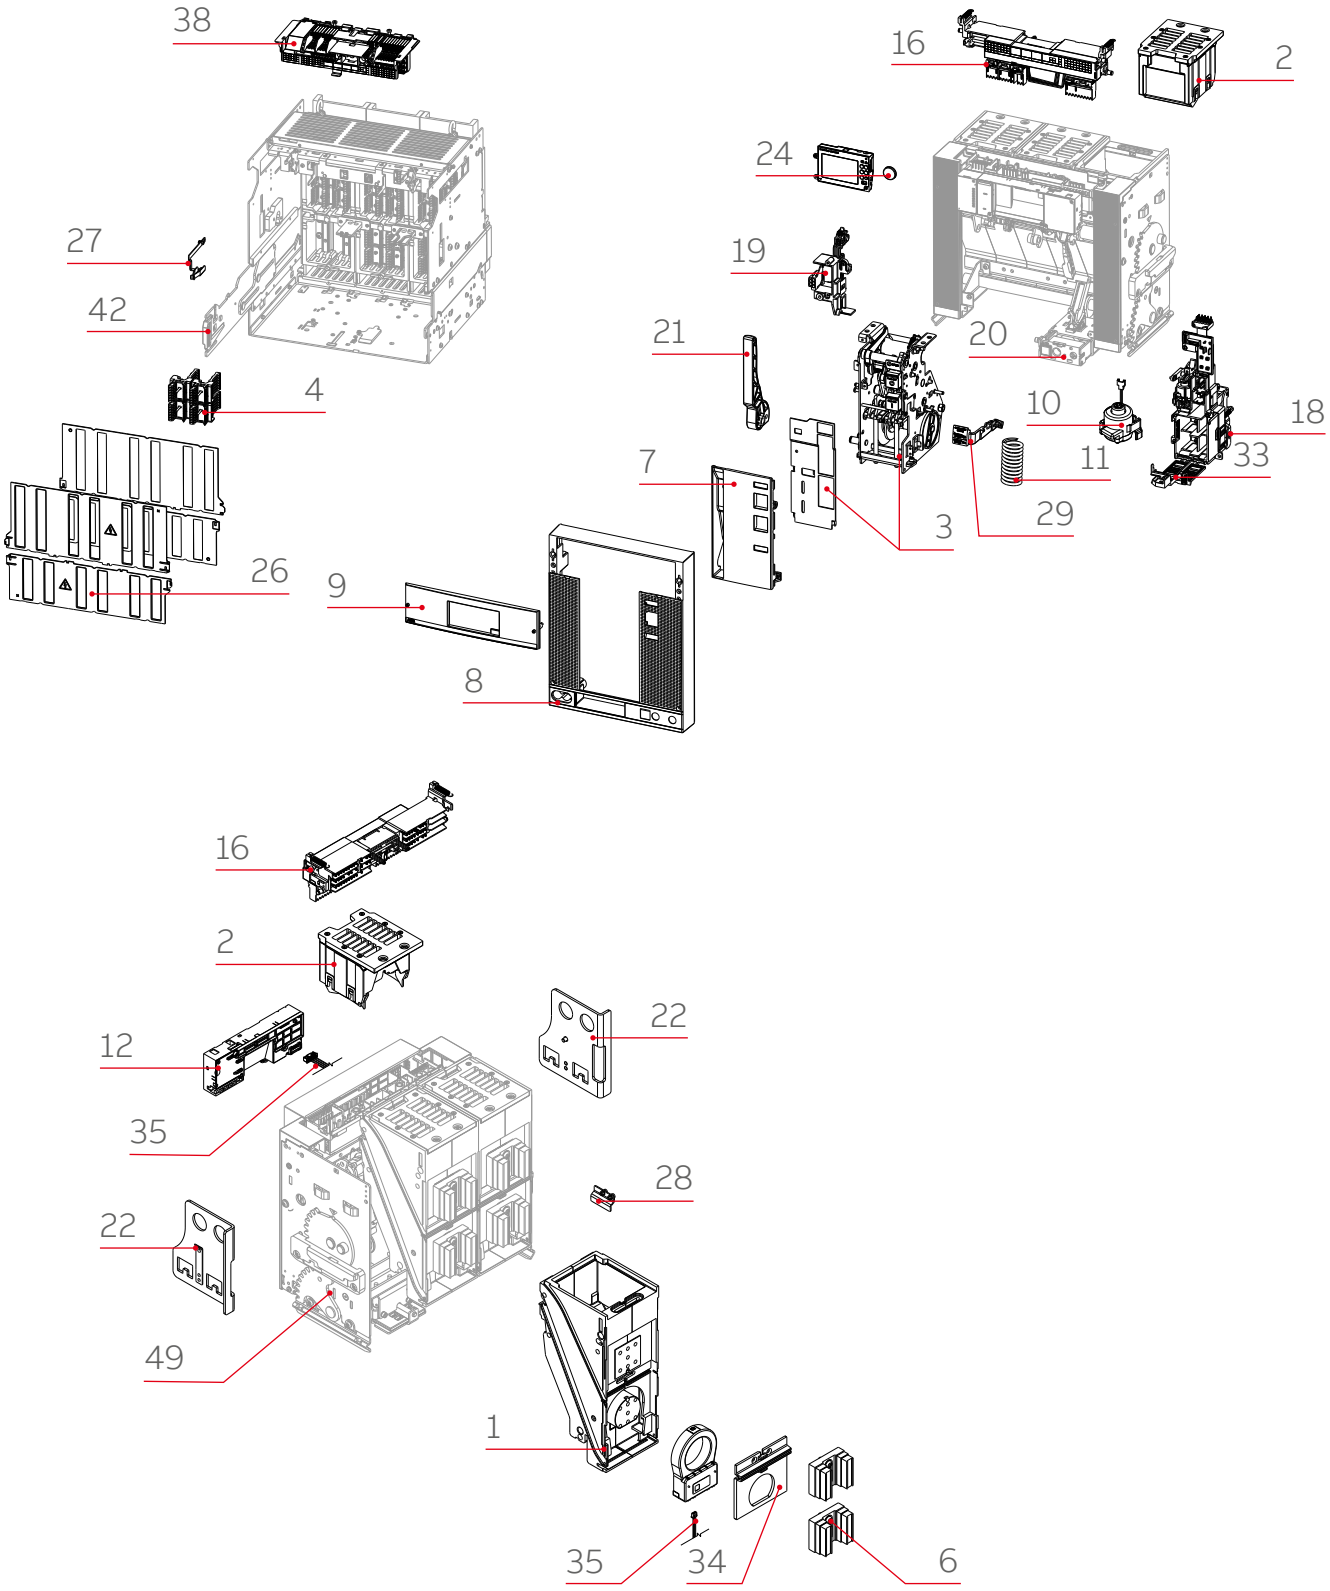

Efficiency: all spare parts are delivered in a short time to fulfil customer's needs

Legend:

Size:	circuit-breaker size
Poles:	three poles (3p) or four poles (4p) circuit-breaker
Version:	F = fixed W = draw out P = plug-in version W (FP) = fixed part of draw out version W (MP) = moving part of draw out version
IEC/UL:	component compatible for IEC or/and UL Standard circuit-breaker
Code:	part number to order
Type spare:	spares can be: • Type A = only ABB L3 expert field service engineer can replace the part
Min quantity:	number of spare parts to order to complete one circuit-breaker

Switches

Providing spare parts for our products guarantees that our customers will be able to minimize unwanted down-time of their processes.

ABB has a wide range of low voltage switches with ratings between 16 and 4000 Amperes. ABBs offering includes diverse fusible and non-fusible solutions suitable for numerous applications that can be operated manually, remotely or automatically.

In particular, our portfolio includes switch-disconnectors, switch fuses, change over and transfer switches, enclosed switches and cam switches. ABB have launched the first low voltage switch in 1970 and today offers spare parts suitable for the latest version of motorized change over switches.

1970's
- OETL63-1600D switch-disconnectors
- OFAA fuse links 
- OESA00 1, 2, 3 switch fuses

TruONE

TruONE ATS spare parts are available from Manufacturing Unit Vaasa, Finland

OX_POWER-400

OX_POWER-1600

Power module

Including the power module for TruONE ATS, two different order codes depending on the type of TruONE ATS.

Open transition (TruONE ATS types OXA_) and Delayed transition (TruONE ATS types OXB_)

Suitable for switches	Type	Code	Weight/unit [kg]
UL 30-260 Amps IEC 200-400 Amps	OXPOWER-400	1SCA158509R1001	1,25

Available only for ABB service engineers

OX_CONTROL-400

OX_CONTROL-1600

Controller module

Including the controller module for TruONE ATS.
Please provide the full TruONE part number (one example OXB250E3S3QB) when ordering as the controller module will be pre-configured at the factory.
Important notice: Firmware update of the HMI module might be required when replacing the controller. Please consult ABB for more details.

Complete mechanism

Including the complete mechanism with power module, controller module and I/O terminal cover. HMI module must be ordered separately if needed.Please provide the full TruONE part number (one example OXB250E3S3QB) when ordering as the controller module will be pre-configured at the factory.
Important notice: Firmware update of the HMI module might be required when replacing the controller. Please consult ABB for more details.
It's recommended to replace the complete mechanism in case there's a need for replacing the power module or controller module as it's easier to replace the complete mechanism instead of replacing individual modules.

Contactors

ABB has developed contactors for over 100 years and has continuously pushed the limits of the technology.

ABBs contactors initially were produced by CEM (Compagnie Electro Mecanique), a company founded in Paris in 1885 that built its first factory in Le Havre in 1895. CEM was a subsidiary of Brown Boveri & Cie and its activities were engineering and production of Electrical machines. Primarily designed only for motor starting applications, ABBs versatile contactors are today installed in a wide range of applications, from railway to wind power. Featuring AF technology as standard, the latest range of ABB's contactors establishes a new industry benchmark. The electronically controlled coil offers multiple benefits over conventional alternatives, and together with ABB's wide product offering – an optimal configuration, every time.

Surge suppressors for contactor coils
Description

The operation of inductive circuits causes overvoltages, in particular on opening of the contactor coil. The electromagnetic energy stored in the coil during contactor closing is restored on opening in the form of surges, the slope and amplitude of which may rise to several kilovolts. A number of drawbacks are observed ranging from interference on the electronic devices to breakdown of insulators and even destruction of certain sensitive components. The graph opposite reproduces the oscillogram showing voltage discharges at the terminals of a 42 V / 50 Hz coil without peak clipping. The coil was switched by 8 series-connected poles of a contactor relay.
Following a burst of discharges with a very steep slope a damped oscillation emerges with a peak value of 3500 V.

Overvoltage Factor

The overvoltage factor k is defined as the ratio of the maximum overvoltage peak value Ûs to the peak value Ûc of the coil rated control voltage Uc:

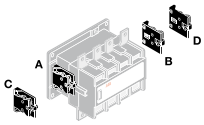

$$k = \frac{\hat{U}s\ max.}{\hat{U}c} \qquad \text{in DC: } k = \frac{\hat{U}s\ max.}{Uc} \qquad \text{or in AC: } k = \frac{\hat{U}s\ max.}{Uc\sqrt{2}}$$

For example the following is obtained for the above graph: $k = \frac{3500}{42\sqrt{2}} \approx 60$

To reduce the harmful effects of these overvoltages, ABB has developed a range of surge suppressors designed to reduce the k factor defined above and to limit or even completely eliminate the high pre-damping voltage frequencies.
Each case is different, but the technical data tolerances and the generous sizing of parts have enabled us to reduce the number of variants.
We have chosen the following solutions: transil diodes, varistors and RC blocks.
Note: A varistor is a resistor whose value decreases to a very large extent when a certain voltage is applied at its terminals.

Auxiliary contact blocks

Description

The auxiliary contact blocks are used for the operation of auxiliary circuits and control circuits.
Types of auxiliary contact blocks for standard industrial environments:

- CAL instantaneous with N.O. + N.C. contacts
- CCL N.O. leading contact + N.C. lagging contact.

The auxiliary contact blocks are equipped with screw type connecting terminals delivered open, protected against accidental direct contact, and bear the corresponding function marking.
Mounting: Screwed onto the right and / or lefthand side of the EK110 ... EK1000 contactors.

All DC operated EK... contactors are equipped with one CCL16-11E on the right side.

Arc guards

ABB offers arc mitigation through Arc Guard System™

With over 35 years of experience in the development of solutions to protect personnel and businesses around the world, ABB offers arc mitigation with the market-leading product Arc Guard System™, an industry standard in several key markets.
Typical applications include all low voltage and medium voltage switchgears.
ABB provides spare parts for TVOC and TVOC-2, the latest two versions of Arc Guard System™.
